

Society for Technology with a Human Face

*Passionate individuals working towards a world of safe water
where arsenic , iron, fluoride and uranium are fears of the past.*

**THE WORLD DOES NOT CHANGE
UNLESS WE CHANGE IT**

OVERVIEW

In 1933, Rabindranath Tagore, an internationally acclaimed poet, philosopher, social reformer, wrote a short essay entitled: “Can Science be Humanized?” In that essay, Tagore drove the point home that:

Knowledge is not enough – be it scientific or philosophical – unless we have been able to transform it into the well being of those who need it most.

With that motto as the guiding principle, “Society for Technology with a Human Face”, an NGO based in Kolkata, West Bengal, India, was conceived and founded in 2006 to serve the impoverished communities in India and other neighboring countries.

Where the mind is led forward by thee Into ever-widening thought and action
Into that heaven of freedom, my Father, let my country awake.

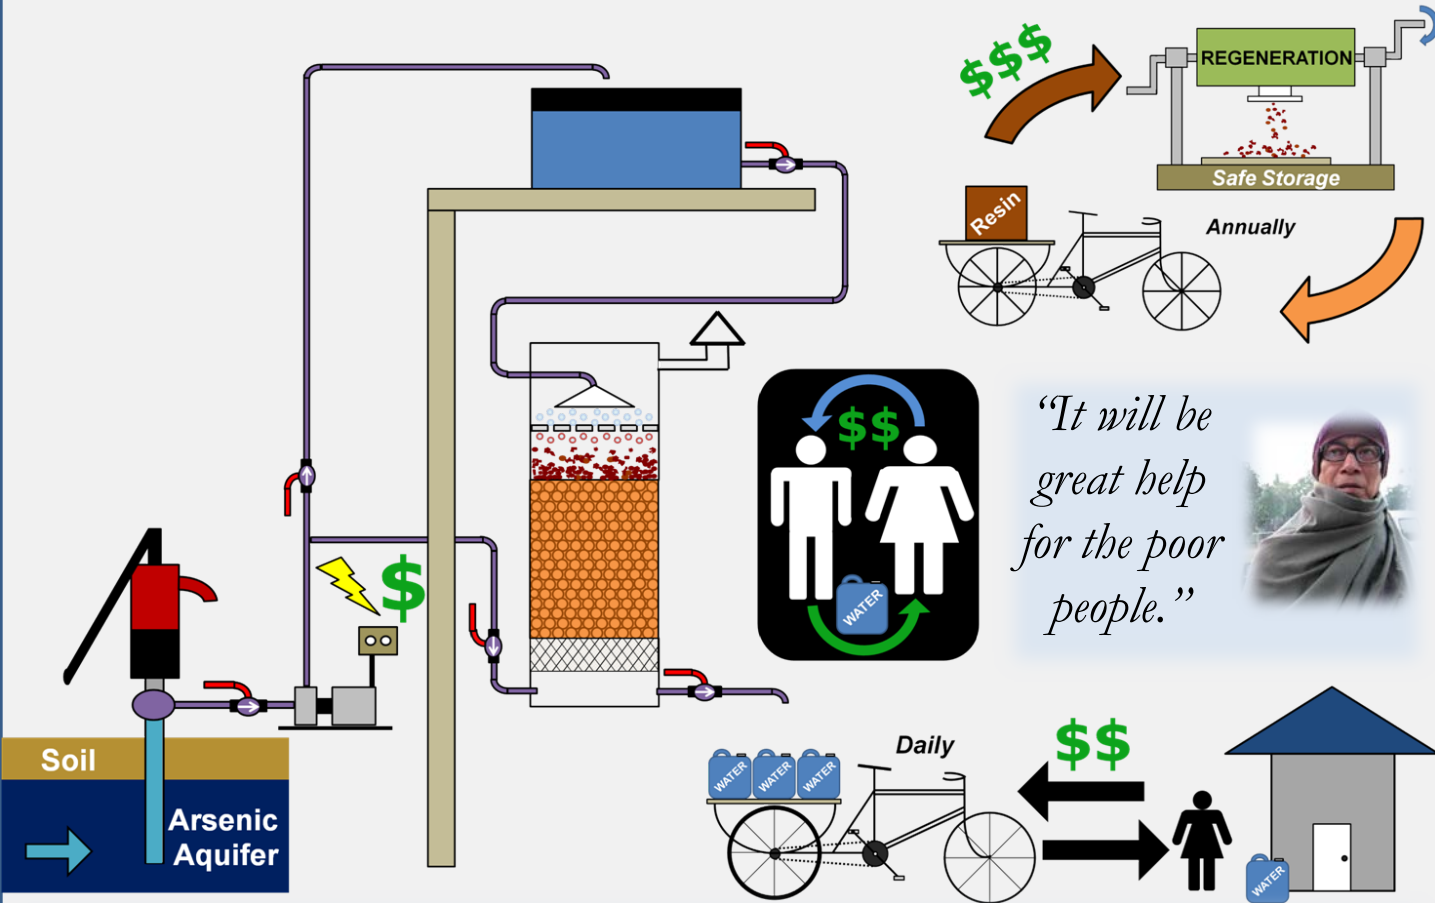

CURRENT WORK

STHF is actively involved in arsenic removal systems that provide safe water to over 1300 families in heavily affected villages of Ashok Nagar, West Bengal. New systems were just installed in Simurali of N. 24 Parganas in cooperation with a small for-profit company.

COMMUNITY ARSENIC SYSTEM

"The water is quite clean now. Everybody drinks this water."- Local Operator

FUTURE

STHF is growing involvement to many states of India and Cambodia. There are many drinking water challenges that

require different systems.

STHF is:

- Creating new home filters affordable to all
- Installing community systems
- Partnering with new NGOs and companies.

DR. ARUP K. SENGUPTA

- STHF Founder
- >25 years Professor
- Lehigh University(USA)
- LayneRT™ inventor
- >300,000 water users
- 8 patents
- Supervised 40 graduate students
- 100 academic publications

“We can serve more people with STHF!” - Ruplekha
